

AprilTag placard -- tag36h11 id 0 -- TILED HOME PRINT

Black square (= pupil-apriltags tag_size) = 350.0 mm | cell = 43.75 mm | sheet = 450 x 450 mm | 3 x 2 = 6 tiles

1. PRINT SETTINGS -- get these wrong and every range the campaign measures is wrong.

Scale: 100% / 'Actual size'. NEVER 'Fit to page', 'Shrink oversized pages' or 'Scale to fit'.
Orientation portrait. Duplex OFF. Paper: US Letter 8.5 x 11 in.
Toner/laser on plain MATTE bond. No gloss, no lamination -- specular sun glare kills the decode
(docs/placard_mount.md 2; Gazebo has no glare model so no sim result covers it).

2. VERIFY THE PRINTER before cutting anything: measure the two bars below with a steel rule.

Vertical bar = 200.0 mm. Horizontal bar = 150.0 mm. Off by more than 1 mm -> fix the print dialog, do not proceed.

3. ASSEMBLE. Tiles are labelled C<col>R<row>, row 1 = TOP. Each tile overlaps its neighbours by 10 mm.

- a) Lay out the grid face up in the C/R order printed in each header.
- b) Trim the RIGHT and BOTTOM white edge off every tile except the last column / last row, cutting on the dashed 'NEXT TILE STARTS HERE' line.
- c) Slide each trimmed tile onto its neighbour until the TAG ARTWORK lines up across the seam -- the black cell edges are the registration, and they are a finer cue than any printed mark.
- d) Tape the seams on the BACK. Any tape on the front adds gloss -> glare.
- e) Trim the assembled sheet on the dashed 450 mm trim line / corner crop marks.

4. ACCEPTANCE CHECK (do not skip -- this is the one that catches a bad assembly).

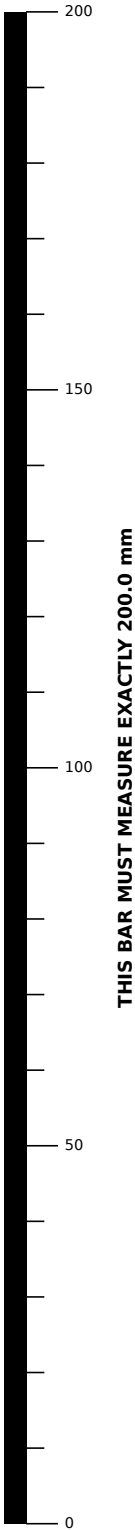

Measure the BLACK SQUARE edge, both axes: 350.0 +/- 1.0 mm. Measure both diagonals: equal within 2 mm.
Then measure the white sheet: 450 x 450 mm. If the black square is right but the sheet is not, re-trim;
if the BLACK SQUARE is wrong, the print scaled -- reprint. The quiet zone (50 mm of white all round)
must be clean: no tape, no pen marks, no crop marks inside the sheet.

5. PRINT TWO of these -- one per panel face, both RIGHT-READING. Do NOT photocopy one and flip it:

a mirrored tag36h11 is not a member of the family and will simply never decode (placard_mount.md 3.6).

tile map (as taped up)
